Simulator / Facility

For theoretical part of the course, lectures and demonstrations will be held in a classroom with set of visual equipment. While the practical exercises shall be demonstrated with the use of a full mission simulator, Lab-volt and refrigeration will be used.

Reasons to Attend the Course

This course is designed to upgrade and standardize the quality of Marine Engineer Officers at the time of their promotion to ensure the safe and efficient operation of ships. Upon completion of the course participants will be able to:

- recognize structure and operation of marine diesel engine as main and auxiliary engine;
- demonstrate operation and proper control of steam plants and engine room auxiliary machines;
- understand and efficiently operate electrical devices and equipment including refrigeration plants, electro-hydraulic and pneumatic systems;
- understand the purpose and method of fuel management and correct handling of waste oil and sludge;
- demonstrate safe working practices within work environment and have a clear understanding of the responsibilities of the engine department in accommodating authorities such as Port State Control and Classification Societies.
